IP Camera Search

In order to have the camera viewable on the network, IP address has to be assigned first. When a user double clicks IPCamSearch.exe file which a software provided in the CD will help to search IP camera and change the IP address easily.

- START : Enable to search IP cameras in the network and display the list of searched cameras.
- 2 IP-CHANGE: After Search, select the displayed camera and click "IP-Change" to change IP address, Gateway and Net Mask.
- 3 UPDATE: Firmware can be updated. Before updating, please load firmware from PC.
- 4 ALL CLEAR: Displayed cameras are all cleared.
- 5 Delete: Delete the displayed cameras in the list.
- 6 WEB: Go to web view for the selected camera.
- 7 REBOOT : Reboot the selected IP cameras
- 8 DHCP: Change to DHCP mode for the selected camera.
- 9 Load firmware from your PC to update the latest firmware
