Introduction

JDI Taiwan Kaohsiung Branch (JDIT-K), a new branch of JDI Taiwan, was formed in Dec 2021 to advance the design, development and sales of market leading industrial LCD display business previously handled by Kaohsiung Opto-Electronics Inc.

Since 2012, Kaohsiung Opto-Electronics Inc., which carried over the display business from Kaohsiung Hitachi Electronics, has explored the use of displays in various industrial applications while strengthening its cooperation with JDI's AutoTech business unit to build the comprehensive Rugged+ portfolio and grown the business with value-added solutions. JDIT-K aims to be the market leader in industrial displays.

In Oct. 2021, JDI sold Kaohsiung Opto-Electronics Inc. to Wistron (Taiwanese EMS) but kept Design, Sales and Marketing, and the KOE brand, with the goal of concentrating on the continual enhancement of an extensive range of high-quality and performance-optimised display solutions. Based in Kaohsiung Cianjen Technology Industrial Park, JDIT-K will maintain a renewed Japanese dedication for the design and sales of high-quality products. The new office is located on the seventh floor of the Forward-Looking Innovation Building.

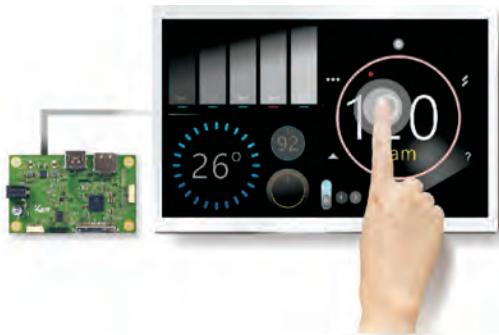

JDI Taiwan Kaohsiung Branch (7F 6-8)

JDIT-K is proud of inheriting an established LCD heritage. Almost 40 years ago, as an early pioneer of LCD technology, Hitachi developed and produced simple character and dot matrix displays. More recently the development and introduction of IPS, LTPS, and Pixel Eyes technology reiterated JDI's commitment to providing display excellence. Continued investment in R&D will ensure that JDIT-K stays at the forefront of evolving and ground-breaking display technology.

Japan Display Inc. (JDI) was formed in 2012 by the merger of the small and medium size LCD panel businesses of Hitachi, Sony and Toshiba in conjunction with the Innovation Network Corporation of Japan (INCJ). In January 2021, JDI adopted a new management structure to accelerate fundamental changes in how to run the business and better serve WW customers. At JDI we want to create a better world, one rich in opportunity for all. We are empowering each and every JDI member globally to welcome challenge, bring fresh perspectives to solving customer problems, and drive world-changing technological innovation. JDI is targeting global No. 1 technology leadership to best serve customers and deliver PersonalTech for a better world.

Evolving LCD technology

Developing cost effective display solutions, enhancing mature technology with new and compatible products, improving LCD optical design, introducing high reliability modules for industrial applications are just some of the challenges that JDIT-K are undertaking to continually evolve and develop LCD technology in the 21st century. JDIT-K's established knowledge and experience of LCD design and development are enabling LCD technologies to progress and migrate to new and exciting display modules.

Rugged Plus

Developed using automotive display experience, JDIT-K's Rugged⁺ Display modules are intended for use in demanding industrial and harsh environmental conditions. JDIT-K Rugged⁺ modules are capable of providing reliable and consistent operation under the severe and rigorous conditions found in some industrial applications while still providing exceptional optical performance. The entire range of Rugged⁺ displays feature industrial environment operating specifications with high brightness, long-life LED backlights and will provide dependable operation between -40°C and +85°C.

Rugged Plus Features

- Strong optical performance
- Highly resistant to ESD, mechanical shock and vibration
- WTR -40°C to +85°C
- Zero Bright Dot Defect

Added Value Display Solutions-NFC

JDI Near-field communication (NFC) is a short-range wireless connectivity technology that uses magnetic field induction to enable communication between devices when brought within close proximity of one another. With NFC function integrated into our displays, customers end products can feature unique characteristics with contactless, close proximity and very low power consumption technology. Additional security measures allow connection to only one machine at a time, with high confidentiality communication allowing safe authentication of credit card transaction. JDI is able to integrate our NFC function into the display module minimizing the mechanical design and optimizing the location of the antenna resulting in a more compact and secure experience for the user.

LTPS Technology

A low temperature poly-silicon (LTPS) TFT LCD, prepared by forming polycrystalline silicon on a glass substrate at relatively low temperatures, achieves high carrier mobility in TFT. Therefore, LTPS TFT LCD realizes a high resolution and high density display that cannot be achieved with A-Si by integrating part of the display drive circuitry on the glass substrate. JDI has developed LTPS displays, and has introduced one of the world's highest density display prototypes.

Low Temperature Poly-silicon

- High resolution
- High aperture ratio
- System on glass
- Low power consumption

IPS was the first LCD technology to provide exceptional colour saturation and colour stability, excellent contrast and deep black levels with a 176° wide vertical and horizontal viewing angles.

IPS has been further developed and evolved with Advanced-Super IPS, IPS Pro and most recently IPS NEO . IPS NEO has a much higher and more stable image performance over viewing angle than any other TFT technology. JDIT-K will continue to develop and improve IPS technology to provide the best wide angle viewing TFT display solution.

Outdoor Outdoor readable and anti-vibration TFT Display

The use of TFT displays in diverse markets continues to expand. Displays are needed in a wide variety of extreme environments which can compromise the display image performance. Outdoor readable TFT are engineered specifically for use in high ambient light conditions ensuring a high quality image is maintained even under direct sunlight. Moreover, JDI is able to support various surface coating, such as anti-glare (AG), anti-reflective (AR), either on the top polarizer or on the cover lens depending on the environmental demand.

JDI has a long experience in automotive and industrial markets. With our engineering expertise, we can optimize the backlight structure to improve the mechanical robustness for severe mechanical shock and vibration applications. Additionally, high brightness is achieved within wide temperature swings while maintaining consistent contrast in extreme environments, suitable for applications such as Construction, Agriculture, Transportation, Marine and ruggedized portable devices.

Added Value Display Solutions-High color gamut

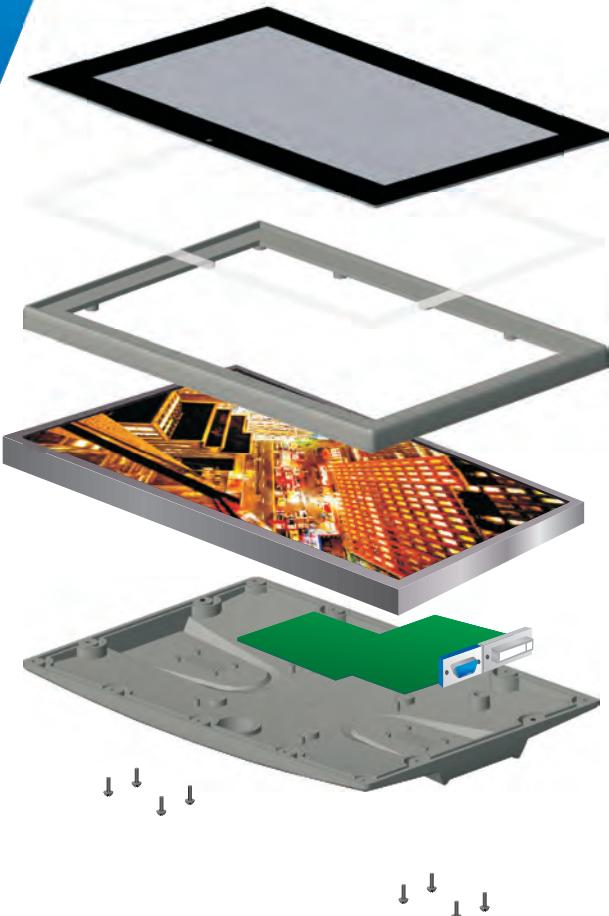

JDI High Color Gamut displays offers a significant improvement in visual performance, enhancing panel applications across various industries. The enriched color range provides more vibrant, accurate, and nuanced color reproduction, essential for markets such as graphic design, digital media, and medical imaging. This technology elevates the user experience, ensuring images and videos display better optical precision. Color saturation is vastly expanded which is beneficial to those demanding a wide color gamut and precise color reproduction. JDI High Color Gamut is suitable for a wide use of applications such as medical devices, avionics, in-vehicle displays and marine vessels or anywhere when used outdoor in high ambient lighting conditions.

Added Value Display Solutions- Industrial Monitor and System Solutions

An expanding range of value added services and products including projected capacitive touch screens, glass bonding, analogue to digital video cards, high brightness backlights, and semi-custom and custom display development are supported.

With the addition of a touch panel through to the development of a fully integrated open frame monitor, all display solutions can be realised to aid and enhance the user experience.

The key features include:

- highly accurate and flexible touch interactions
- support for multiple touch points - up to 10
- remains fully functional under up to 8mm protective cover glass
- water and moisture resistance - wet fingers or gloves
- enables enhanced optical performance
- optional optical bonded cover glass

Projected Capacitive Touchscreens

Expand standard touch panel line-up for screen-sizes range from 7-inch up to 12.3-inch with resolution ranging from 800x480 pixels up to 1920 x 1200 pixels.

Analogue to digital boards

JDT-K's compact, embedded video driver boards enable a cost-effective and easy-to-use display enhancement. The fully integrated analogue to digital video circuitry supports multiple interface options including VGA, DVI-D, HDMI and DisplayPort. On-board software provides on-screen display functions for backlight dimming, image scaling and optical adjustments.

Higher Definition Displays

Higher definition display enables highly accurate representation of image detail such as colour gradients and authentic colour reproduction. Excellent optical performance is maintained with high contrast ratio and high brightness specification enabling bright, sharp display images. Exceptional colour performance and image clarity at all viewing angles are particularly important in professional broadcast and medical imaging applications

Applications

The development of higher definition TFT reflects the trend for higher pixel density and enhanced image clarity found in consumer devices such as monitors, tablets and smartphones. The use of higher resolution displays with greater pixel density enables accurate reproduction and representation of graphical information such as measurement and diagnostic images, and video reproduction.

Rugged Plus Displays for Extreme Environmental Conditions

All of JDI-T's Rugged Plus displays are designed to function in challenging and harsh environmental conditions. The entire range of Rugged Plus displays feature industrial environment operating specifications with high brightness, long-life LED backlights and will ensure reliable operation between -40°C and +85°C.

Exceptional optical performance is ensured as many Rugged Plus displays utilise JDI-T's IPS Pro technology, which delivers exceptional colour saturation, colour stability, contrast and black levels with a 176° wide vertical and horizontal viewing angle.

JDI-T's Rugged Plus displays are targeted for use in high reliability industrial, medical, marine, automotive and aerospace applications where consistent and guarantee operation under extreme temperature, mechanical shock and vibration is a necessity.

5.0"	640 x 480	TX13D200VM5BAA	A-Si	TN	CMOS	R-T/P	600	370:1	Built-in	119.4 x 89.1 x 9.3	IPS-like
5.0"	640 x 480	TX13D202VM5BAA	A-Si	TN	LVDS	R-T/P	600	370:1	Built-in	119.4 x 89.1 x 9.3	IPS-like
5.7"	320 x 240	TX14D24VM1BAA	A-Si	TN	CMOS	R-T/P	450	600:1	n/a	167 x 109 x 9.2	SP14Q/SX14Q compatible
5.7"	320 x 240	TX14D25VM1BAA	A-Si	TN	CMOS	R-T/P	400	600:1	n/a	131 x 102.2 x 10.9	Compact mechanical outline
5.7"	320 x 240	TX14D26VM1BAA	A-Si	TN	CMOS	R-T/P	800	800:1	n/a	131 x 102 x 7.1	Slim mechanical design
5.7"	640 x 480	TX14D203VM0BAA	A-Si	IPS	CMOS	R-T/P	1000	1000:1	n/a	131 x 102.2 x 7.6	High Brightness
5.7"	640 x 480	TX14D204VM0BAA	A-Si	IPS	LVDS	R-T/P	1000	1000:1	n/a	131 x 102.2 x 7.6	High Brightness
(NEW)	1024 x 768	TX16D209VM0BAB	LTPS	IPS	LVDS	n/a	1400	1500:1	Built-in	153 x 118 x 8.7	Higher Definition
	6.5"	640 x 480	TX17D01VM2CAA	A-Si	TN	CMOS	R-T/P	600	600:1	Built-in	153 x 118 x 9.1
6.5"	640 x 480	TX17D01VM2EAB	A-Si	TN	CMOS	R-T/P	1000	600:1	Built-in	153 x 118 x 9.1	AR polariser
6.5"	640 x 480	TX17D01VM5BAA	A-Si	TN	CMOS	R-T/P	800	350:1	Built-in	153 x 118 x 9.1	IPS-like
10.4"	800 x 600	TX26D200VM5BAA	A-Si	TN	LVDS	R-T/P	1000	400:1	Built-in	243 x 185.1 x 10.1	IPS-like
10.4"	800 x 600	TX26D200VM2BAB	A-Si	TN	LVDS	R-T/P & Pcap T/P	1500	800:1	Built-in	230 x 180.2 x 10.1	Ultra High Brightness
10.4"	1024 x 768	TX26D211VM0BAA	A-Si	IPS	LVDS	On request	1300	1000:1	Built-in	230 x 180.2 x 9.5	100Khrs LED lifetime, 24-bit
12.1"	1024 x 768	TX31D207VM0BAB	A-Si	IPS	LVDS	On request	1000	1000:1	Built-in	260.5 x 203.0 x 9.5	100Khrs LED lifetime, 24-bit

Product features

Screen size	Product type	Resolution	LTPS	IPS	IPS-like	TN TFT	FID	Rugged Plus	Higher Definition	Standard format (4:3)	Wide format	LED Driver built-in	Outdoor readable	CMOS interface	LVDS interface	6-bit	8-bit	Operating Temp. (-40~55°C)	Resistive Touchpanel option	Capacitive Touchpanel option
